Proposal for Installation of Pavement on Main Street Long Compton

1. Introduction / Background

Over the last two years the parish council has commissioned a feasibility study of traffic management options in Long Compton followed by two village consultations.

Whilst most traffic calming options are not proceedable due to the village dark skies status, it is possible to make pedestrian movement safer at a point in the village where there is no pavement and poor visibility.

2. Objective*:*

To improve pedestrian safety at the south end of the village towards the junction with Old Hill.

3. Proposal Details

Installation of a 300meter stretch of pavement on Main street from the junction of Old Hill to Bramble Cottage. To include the relocation of signage.

4. Costs & Funding

Total cost	£28,752
Grant funding from Warwickshire County Council	£10,000
Donation from Long Compton Industrial Park (Gavin Aldworth)	£2800
Cost to Long Compton Parish Council	**£15,952**

6. Risks & Considerations

- The installation will be undertaken by Warwickshire Highways approved contractors**.**
- There may be some additional costs as the original quote was received in March 2025
- Timeframe for installation not yet known.

7. Conclusion & Call to Action

I recommend the parish council approve this proposal and allocate the necessary funds so installation can be commenced.
